**Rolls-Royce Training Services:
Insurance for delivery of cost-saving and life-saving knowledge:**

Limit liability risk

Improve safety practices

Protect capital equipment investment

Cut operating cost

Decrease downtime

Extend equipment life-cycle

The power of knowledge

Protect and enhance your equipment investment

From the moment of start-up, the difference between safe, profitable operation and lost production from sophisticated compression and power generation packages depends upon properly trained, reliable personnel.

Your investment in Rolls-Royce equipment demonstrates a commitment to excellence in your operation. Our training services are based upon that same commitment to excellence. With content founded on proprietary OEM knowledge and world class engineering presented by experienced professional instructors, our courses combine classroom instruction and workshop-style, hands-on experiences to optimize learning.

Customized training: Knowledge focused on your needs

The Rolls-Royce training process begins with our professional training assessment of personnel training needs relative to customer structure and site specific equipment as supplied. Based upon the benchmarks established during this assessment, distinct training goals are established. This customized approach assures that the course content is relevant, focused, cost-effective and measurable.

OEM training customized for your installation:

**Coberra® • Avon • 501/601
Gas Compression Packages
Power Generation Packages
En-Tronic® Control Systems
Motor-drive packages**

Incremental learning

Training needs can change with advances in technology and upgrades to machinery and control systems. Comprehensive, targeted training keeps pace with changes in technology environments. Rolls-Royce Customer Training Centers provide standardized or customized refresher and upgrade training programs, to maximize

Experience, Experience, Experience

Over the years, we have successfully trained thousands of operators, mechanics, technicians, engineers and supervisory support personnel on a global basis. From the North Slope to the North Sea, from the Middle East to the Pacific Rim, our professional instructors excel in effective communication in a variety of cultures and languages, utilizing interpreters when needed.

Rolls-Royce instructors (just like our equipment) are field-proven! In addition to OEM expertise, our full time instructors have experienced some of the world's most demanding compression and power generation applications – and, most importantly, have the skill to share the information, knowledge and wisdom gained from their experiences.

your upgrade investments or to meet changing personnel needs. Utilizing state-of-the-art multi-media presentations incorporating theoretical as well as hands-on learning systems, training can focus on overall gas turbine packages, or package elements – including controls, gas generator, driven equipment, equipment operation, on-line diagnostics and procedural maintenance.

Knowledge

Rolls-Royce

Dedicated training facilities plus on-site options

Rolls-Royce dedicated training facilities centered in Ansty, Coventry, England and Mount Vernon, Ohio, USA, as well as satellite facilities in Liverpool, England and Singapore, feature fully-equipped classrooms for state-of-the-art multi-media presentations. Facilities feature a variety of equipment models, stand or crane-accessible for in-depth hands-on training, with control systems simulating working conditions.

Customized curriculum on your site

Rolls-Royce professional instructors are equally experienced at delivering the same training benefits at the equipment site, frequently working in remote locations. As with Rolls-Royce facility-based training, the process begins with individual assessment

and is equipment and application-specific, focusing on individual customer goals. On-site training is based on the proven learning techniques used at our dedicated facilities, including multi-media presentations.
